

UFI Filters' heavy-duty offering grows again

- UFI continues to expand its Aftermarket filter ranges for heavy-duty vehicles (HDVs)
- 78 new heavy-duty filters added in 2024 alone, including 67 for off-road vehicles
- Raft of advanced introductions made possible year after year, thanks to UFI's investments in HDV technologies and global original equipment (OE) expertise

Nogarole Rocca, 11 December 2024 – UFI Filters, the leading filtration, thermal management and hydrogen mobility company, has continued to make the heavy-duty Aftermarket one of its key priorities in 2024.

The company has significantly expanded its heavy-duty filter ranges, announcing 78 major new additions for a wide range of vehicles in the past year.

This ongoing strengthening of UFI's heavy-duty vehicle offering has been achieved yet again, despite the company having already extended its HDV Aftermarket ranges significantly in recent years.

Of the 78 introductions made in 2024, 67 of them were for the off-road sector and 11 for the truck and bus markets. They included five new oil filters, eight fuel filters, seven air filters, six cabin filters (off-road), 51 hydraulic circuit oil filters and one water filter (trucks).

Thanks to these additions, UFI's range of filters for the heavy-duty Aftermarket is now more complete than ever before, with more than 1,400 part numbers for on- and off-road use.

In the last three years alone, from 2022 to 2024 inclusive, the number of new UFI heavy-duty Aftermarket references has been considerable – totalling 466 introductions, of which 371 were off-road and 95 for trucks.

The expansions underline how UFI Filters' Aftermarket customers benefit from the company's extensive, year-on-year investments in the heavy-duty Aftermarket sector; and from UFI Group's original equipment experience, supplying filters for 50 per cent of global heavy goods vehicle production.

These technologies allow UFI Filters to constantly enrich its heavy-duty Aftermarket catalogue with products of the same, exacting quality as the Group's OE components.

Among UFI Group's most recent successes in heavy-duty original equipment is the supply of the new filtration module for **FPT Industrial's Cursor XC13** engine, FPT's top-of-the-line truck engine. UFI also developed the oil filter for one of the most popular heavy-duty truck engines, **Daimler Truck AG's HDEP (Heavy-Duty Engine Platform) OM471** for **Mercedes-Benz Truck** applications.

PRESS RELEASE

In fact, the oil filter cartridge specifically designed for the latter OE application is just one of the recent additions to UFI Filters' heavy-duty Aftermarket catalogue. The company's other established manufacturer partnerships also include **Weichai**, **MAN**, **Iveco** and, in the off-road sector, **New Holland**, **FPT** and **SAME Deutz-Fahr**.

UFI Filters:

Founded in 1971, UFI Filters is a global leader in filtration technology and thermal management solutions, as well as hydrogen filtration. It serves a wide range of sectors – from automotive, aerospace and marine, to specialised industrial and customised hydraulic applications. Renowned for its innovation, UFI's products and know-how are found in all kinds of vehicles – from Ferrari and other top F1 teams, to the European ExoMars spacecraft.

UFI supplies the full range of air, oil, fuel, cabin, hydraulic and coolant filters as well as thermal management systems (including heat exchangers for combustion, electric and hybrid vehicles) to the automotive sector, meeting the needs of nearly all car brands and motorcycles as well as commercial, heavy-duty (on-road and off-road) and agricultural vehicles. In the OE market, UFI is a leading filtration provider. Each family of filters within the company's two Aftermarket brands, UFI and SOFIMA, covers 98% of the European car parc.

One of the first Italian companies to identify growth opportunities in the Far East, today UFI has 22 industrial sites and employs over 4,000 people in 21 countries. It employs over 250 specialised technicians in its 3 Innovation and Research Centres and holds more than 320 patents. As a research-driven company, it reinvests over 5% of its revenues in R&D.
